## Multi-purpose Building Board

The Marmox Multiboard Pro is a multi-purpose, lightweight building board, with a CFC-free polystyrene core, covered with a close woven fibreglass mesh embedded in a cement polymer mortar with a 'honeycomb' finish.

Easy to cut and shape, the Multiboard Pro can be applied to practically any substrate or framework, such as timber, steel or concrete, while the honeycomb finish provides a surface that is ready to receive tiles, plaster or other finishes. The boards have been tested to hold a vertical tile weight of over 60kg/m<sup>2</sup>.

As an alternative to bricks and mortar or regular dry walling, the Multiboard Pro provides superior thermal insulation and waterproofing, as well as fire-retardant and sound-proofing properties, and a ready-to-finish surface, all in one.

These excellent properties, speed and simplicity of installation, makes the Marmox Multiboard Pro the perfect modern building solution.

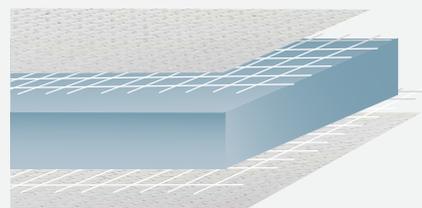

## Features & Benefits

- The XPS closed-cell structure is fully waterproof, and will not absorb moisture or rot, even if it becomes damaged.
- Excellent thermal barrier, saving on heating and cooling costs.
- Lightweight boards are easy to work with and install into new and existing buildings.
- High compressive strength ensures integrity, and does not deteriorate or delaminate over time.
- Various thicknesses available for every application, including a sloped board to direct water run-off.
- A variety of handy accessories including Marmox Multiseal, Adhesive, washers, and more are available.
- No curing or drying time - board is ready to tile or plaster immediately.

## Applications

- Waterproofing bathrooms, wet rooms
- Lightweight wall and ceiling construction
- Balconies and terraces
- Steam Rooms
- Interior / exterior wall insulation
- Sound step proofing
- Bath / spa construction.

1. Cement Polymer Mortar with Reinforcing Mesh
2. Waterproof Extruded Polystyrene (XPS)
3. Cement Polymer Mortar with Reinforcing Mesh
