

Warmup's wafer thin underlamine heater fits between the floor and underlay.
If it wasn't for the lovely warm feeling in the room, you would never
know it had been fitted.

Underlamine heating

Underlamine heating

Unlike conventional heaters that warm one particular spot, Warmup radiant floor heating evenly distributes the warmth throughout the floor and up into the room, leaving no uncomfortable cold spots. This style of heating warms the room up faster and more effectively. The heat is directed where it is most pleasing - the feet - leaving the air we breathe slightly cooler.

As the heating solution becomes part of the floor, with no hot or moving parts, you can still enjoy an uncluttered home, as well as a maintenance-free heating system. Best of all, this clean, silent and odour-free heating solution will not dry out the air or aggravate allergies. For ultimate control and maximum energy efficiency, we recommend the use of an intelligent Warmup thermostat.

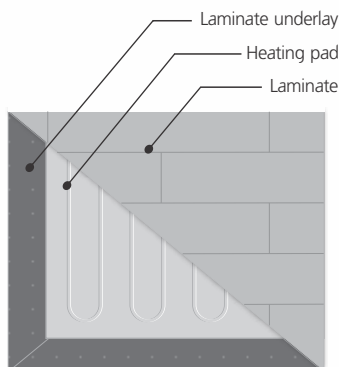

Product Range

A good quality underlay is essential for reducing downward heat loss. A minimum of 200 micron damp proof membrane should be used, or Combilay Underlay (which is a combination of underlay and damp proof membrane in one).

The underlamine heating pads are designed to never overheat and can be left on continuously. However due to the SAWALFA regulations for heating laminates, a floor sensor is to be installed under the pad, between the heating wires. The sensor works in conjunction with an intelligent Warmup thermostat, which ensures that the temperature never exceeds 27° C under the laminate. To ensure the laminate is heated evenly, at least 90% of the floor space must be covered with heating pads.

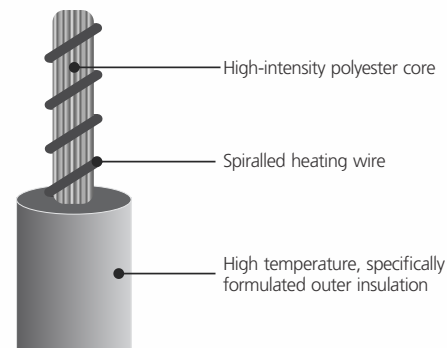

Laminate heating pads are suitable for use under most modern laminate locking systems, however glued timber floors require a different type of Warmup heating solution.

Our underlamine heating pads are foil based, ensuring even heat distribution.

Thanks to this technology, they are 100% waterproof, further acting as an earth shield over the internal core wire.

Built with spring like flexibility, the core wire is a durable cushion that can withstand heavy furniture, snooker tables, and other household items.

Warmup has certified installation specialists nationwide, who will be pleased to provide more details on Warmup products and services. Contact us to discuss your requirements.
